

About RideOnTrack

At RideOnTrack we develop operational communication systems for mission-critical networks. Our products and services are used by customers for which telecommunication is an essential part of their day to day operations, customers like railways, the police, public safety, disaster relief, etc. RideOnTrack delivered the world's biggest fully SIP/IP-based dispatching network at Infrabel and ProRail, with close to 1300 dispatcher terminals in operation.

At RideOnTrack we consider ourselves technology frontrunners. Among others, RideOnTrack can provide Dispatcher solutions, IoT edge computing, Gateway solutions, Voice Recording & playback, and Digital Mobile Radio (DMR).

Our employees translate the specific requirements of our customers into solutions based on the latest state of technology. You will experience the direct impact of your activities in product implementations at the customer and appreciate the ability to work in an innovative environment and the freedom to work with the latest technology and tools.

To further stimulate the company's international ambitions, we are now looking for a:

Test Engineer

Tasks and Responsibilities

- Meetings with the software development team to understand the features to be tested
- Writing test plans and creating test cases for new features (incl. automated tests)
- Performing tests according to the test plans, both locally and together with the end-customer at their offices
- Ensuring all tests and procedures meet company and industry standards
- The use of standardized tools, such as a SIP testing software suite
- Maintenance and improvement of the lab systems
- Preparation of test reports for the management and customers

Required qualifications

- Bachelor's or Master's Degree in Engineering, Computer Science, Computer Engineering, Physics or Mathematics
- Problem-solving skills are a must
- Ability to troubleshoot and think out-of-the-box
- High-level technical writing skills
- Extensive knowledge of test procedures
- Detail oriented
- Knowledge about SIP(-R) is considered a plus
- Familiarity with testing tools is considered a plus

Our offer

- Have a strategic impact on the implementation of our telecommunication products,
- Become part of a growing scaleup company, with career growth opportunities,
- Work in an inspiring/innovative environment at our offices at Ciral Innovation Centre in Geel, Belgium,
- The ability to further develop your skills and to gain new experiences,
- Above market level benefits and financial compensation,
- Develop your career in an international environment.

We encourage fresh graduates to apply for this vacancy!
